A concentrated intestinal gel form of LEVODOPA + CARBIDOPA

Delivered by PEG-J tube + external pump

- in use worldwide since 2004
- in multiple centres in Canada since 2014
- by over 170 patients in Canada as of Jan 2018

Pump weighs about 3 lbs

and is worn about 16 hours/day (varies by patient)

Specially trained Neurology and Gastroenterology doctors and nurses

Patient and caregiver compliance are essential for positive outcomes

DUODOPA IS NOT A CURE
NOT Experimental • NOT Research

GOAL OF TREATMENT
- Smooth out medication fluctuations
- Better symptom control

At this time DUODOPA is not covered in all provinces. Patients should know it is expensive

Private and public funding is a lengthy process, may take months, and should be in place PRIOR TO TREATMENT

No two patients are alike — treatment times and therapy responses vary
